

CT Connect - Instant Internet access wherever you are

CT Connect makes it extremely easy to always be online, even when moving between different of networks. The user doesn't need to worry about which network is available, or how to log on. Just open the laptop and you're connected!

CT Connect makes Internet access easy, regardless of location and network by automatically finding the best connection for uninterrupted, seamless connectivity. This solution, sold through service providers, offers total mobility through "one-click-to-Internet" from any location or network. The software runs in the background, constantly monitoring available networks and seamlessly connects to the best option. This convenience gives subscribers easy access to the Internet wherever they are, while generating new revenue streams from the increased usage of data services for the operator.

As laptop users move between different wired and wireless networks CT Connect automatically detects, selects and seamlessly logs on to the best connection. It eliminates the need for the subscriber to keep track of network availability, remember different log in parameters, or perform any manual configurations when transferring between different networks. CT Connect monitors LAN and WLAN connections, handles dial-up to 3G and GPRS, and performs automatic logon to wireless hotspots. It automatically selects the best connection based on a combination of availability, speed and user-specified policies.

Customized branding for OEM customers

CT Connect includes a usability tested white label GUI to support customized branding. Service providers can adapt the graphical design and create their own branded clients, e.g. for targeting different customer segments. This way service providers increase the exposure of their brand by importing it to the customer's desktop.

Introducing cost control

When users logon remotely from hotspots or other sites with roaming and dial-up charges, there is uncertainty about cost, which may make them reluctant to use data services. To eliminate such concerns, CT Connect includes functionality for cost control. The solution supervises the current data rate, data amount and uptime, and implements customizable warnings, based on operator preferences, tariffs, and pricing schemes. For example, a subscriber can be notified when they are about to exceed the amount of data included in a flat-rate fee, or

ONE CLICK AWAY. Just open the laptop and go. CT Connect seamlessly provides the best available connection for fast and efficient wireless communication.

receive a warning before connecting to an operator that is not included in a certain service plan.

Bringing SMS to your laptop

CT Connect includes SMS functionality so that the user can compose text messages on the computer and send them to mobile phones. This PC-to-mobile messaging allows for easy, convenient and fast communication. By providing this value-added service, service providers benefit from increased traffic, revenues and loyalty to their brand.

The SMS function includes management of Contacts and supports the UCS-2 and the IRA character set on top of the standard GSM character set, allowing for UNICODE messages.

CT CONNECT

PRODUCT OVERVIEW

Migration path to secure corporate network access

CT Connect is a stand alone solution for quick and convenient access to the Internet. CT Connect is easily upgraded to CT Secure Connect for enterprises that require a secure connection to their internal networks. The product can also be combined with existing VPN and Mobile IP clients.

Easy deployment and intelligent support

CT Connect includes an automated self-help tool to support the user throughout the product lifecycle. This integrated

support tool simplifies the set-up by providing one-click installation, client configuration and profile management. Whatever hardware, network or protocol used, CT Connect takes care of all necessary configurations

It also manages troubleshooting and is available both on- and off-line. Columbitech's self-help tool minimizes cost of ownership, reduces the need for customer support and further enhances the usability experience, which is critical for service providers selling the solution to end users directly.

Technical Highlights

- Support for all 3G data cards
- Support for Windows XP and Vista,
- Multiple network support: LAN, WLAN, 3G, EDGE, GPRS, 2G
- Support for silent WLAN hotspot logon using WISPr specification

Key Benefits

- Simplicity and ease-of-use
 - Seamless roaming on all networks
 - Easy and immediate access, regardless of location
 - Automatic connection to the best available network (price/performance/signal strength)
 - Seamless Hotspot logon
- Trouble free installation, configuration and support
- Cost control and data statistics
- SMS functionality
- Enforces brand through customized and operator branded client
- Easy to upgrade to include CT Secure Connect, for secure corporate access
- Can be combined with existing VPN and Mobile IP clients

Columbitech, a leading mobile VPN security software provider, offers end-to-end security, convenient always-on connectivity, and optimized performance for any mobile device and wireless network. With a strong footprint in the retail and the service provider industry, key customers include three of top ten US retailers and several major European service providers. The embedded solution is OEM licensed by leading companies, including Motorola, Toshiba TEC, Hewlett Packard and Ericsson. Columbitech solution holds a FIPS 140-2 certification. The company is privately held with offices in Stockholm, Sweden, and New York, USA.
